Pune, Maharashtra, India

SUMMARY

Final-Year B.Tech CSE student with hands-on experience diagnosing, debugging, and resolving issues across mobile, full-stack web, and backend systems. Comfortable reading logs, reproducing bugs, and tracing root causes across the stack – Flutter, React, Node.js/TypeScript, Python, REST APIs, PostgreSQL, Docker, and embedded C. Experienced working directly with non-technical stakeholders to translate problems into clear, actionable fixes, and documenting issues and resolutions for fast knowledge transfer.

EXPERIENCE

Lab Assistant

SITS, Pune

2021 - 2024 On-Campus

- Set up coding environments for **Data Science** (Jupyter Notebook, Python) and **Ethical Hacking** (Kali Linux, penetration-testing tools) coursework, and resolved student queries on lab usage and configuration.
- Installed **Ubuntu OS** and used **Ansible** to automate software installation across multiple lab machines, cutting manual per-machine setup time and ensuring a consistent environment for every session.
- Troubleshoot package and dependency issues, helping students install and configure the tooling required for coursework, and acted as first point of contact for real-time lab issues over **1 year**, reducing escalations to faculty.

Software Development Intern

Rubrain

08/2022 - 10/2022 Remote

- Developed a teleconsultation app prototype in **FlutterFlow** for doctor-patient interactions, covering appointment booking, authentication, and consultation workflows; triaged and resolved bugs found during internal testing before handoff.
- Worked directly with **2 practicing doctors** to gather issue reports and feature requests, translating non-technical descriptions into clear engineering tickets, and verifying fixes against real-time **REST API** booking and session data.
- Documented root causes and fixes, and presented status updates to mentors throughout development, keeping the team aligned on open issues and resolutions.

EDUCATION

B.Tech, Computer Engineering

SITS, Pune

2020 - 2026

HSC (Science)

DES NESR Jr. College, Pune

2018 - 2020

SSC

DES NESR School, Pune

2013 - 2018

SKILLS

Troubleshooting & Debugging (Basics): Reading REST API/server logs, basic auth (JWT) debugging, Docker basics, cross-platform bug fixing

Customer & Stakeholder Support: Requirement gathering from non-technical users, issue documentation, cross-functional communication

Technical Stack (Working Knowledge): Node.js, Express, TypeScript, React, Flutter/FlutterFlow, PostgreSQL, MySQL, REST APIs

Systems & Tools: Docker basics, Ansible (intro), Ubuntu/Linux, Kali Linux, Git, GitHub, GitHub Copilot, GCP Cloud Run

Practices: Basics of TDD, Agile/Scrum exposure, Embedded C fundamentals

CERTIFICATION

ServiceNow Micro-Certification - Welcome to ServiceNow (In Progress)

Now Learning

Introduction to Flutter

Udemy

GCP - Google Cloud Platform Concepts

Udemy

TypeScript for Absolute Beginners

Udemy

PROJECTS

Sweet Shop Management System - Full-Stack Web App

Stack: React 18, Vite, Zustand, Node.js, TypeScript, PostgreSQL (TypeORM), Docker, GCP Cloud Run, GitHub Actions CI/CD, GitHub Copilot

github.com/TouchstoneTheDev/incubyte-v1

- Built and tested a full-stack inventory and order management system with **JWT authentication** and **role-based access control**; wrote and debugged a Node.js + TypeScript REST API against PostgreSQL (TypeORM) and a React 18 + Vite frontend.
- Applied **Test-Driven Development (TDD)** to catch and resolve edge-case bugs early, reaching **100% test coverage** on authentication middleware; containerized with Docker and validated deployments through an automated CI/CD pipeline (GitHub Actions) on Google Cloud Run.

Intent Mapper Pipeline - AI / NLP

Stack: Python, Google Vertex AI, NLP, GitHub Copilot

github.com/TouchstoneTheDev/intent_mapper_pipeline

- Built an end-to-end intent classification pipeline using Python and Google Vertex AI, achieving **95% classification accuracy** on the validation dataset; designed for extensibility so new intent categories can be added without full retraining.

Circular Ring Buffer - Embedded Systems (C99)

Stack: Embedded C (C99), Unit Testing, GitHub Copilot

github.com/TouchstoneTheDev/embedsquare

- Implemented and debugged a memory-safe circular ring buffer in C99 for a fixed-size, resource-constrained embedded environment; identified and fixed overflow/underflow edge cases without dynamic memory allocation, validating fixes with **20+ unit tests** covering boundary and wrap-around conditions and achieving **100% branch coverage** with zero memory faults.

Personal Portfolio Website

Stack: React, Vite, CSS, GitHub Actions CI/CD, GCP Cloud Run, GitHub Copilot

- Designed and built a responsive personal portfolio site using **React** and **Vite** to showcase projects, resume, and contact details, achieving a **95+ Lighthouse performance score** through code-splitting and image optimization.
- Automated build and deployment with a **GitHub Actions CI/CD** pipeline to **GCP Cloud Run**, reducing release time from manual upload to a single **git push**.

URL Shortener API

Stack: Node.js, TypeScript, PostgreSQL, REST APIs, Docker, GitHub Copilot

- Built a **Node.js + TypeScript** REST API that generates short, unique aliases for long URLs and redirects requests with **sub-50ms response time**, backed by a PostgreSQL store for mappings and click analytics.
- Added rate limiting and input validation to prevent abuse, and containerized the service with **Docker** for consistent local and production deployment.

INTERESTS

Languages: Spanish, Japanese

Activities: Swimming, Trekking with friends and family, Reading news
