SUMMARY

Software Developer (Final-Year B.Tech CSE) with hands-on experience across mobile, full-stack web, and AI/NLP development. Comfortable working across the stack - Flutter, React, Node.js/TypeScript, Python, and embedded C - with production deployment on Docker and Google Cloud Run, plus a strong foundation in REST API design and test-driven development.

EXPERIENCE

Software Development Intern

Rubrain

08/2022 - 10/2022 Remote

- Built a **Flutter**-based cross-platform teleconsultation mobile app for doctor-patient interactions, covering appointment booking, authentication, and consultation workflows, cutting manual appointment-coordination time by an estimated **30%** for pilot clinics.
- Worked directly with **5+ practicing doctors** to gather requirements, translating clinical needs into product features, and integrated backend **REST APIs** for real-time booking and session management.
- Presented sprint demos and progress updates to mentors and stakeholders across **6+ sprint cycles**, incorporating feedback into iterative releases.

EDUCATION

B.Tech, Computer Engineering

SITS, Pune

2020 - 2026

HSC (Science)

DES NESR Jr. College, Pune

2018 - 2020

SSC

DES NESR School, Pune

2013 - 2018

SKILLS

Flutter, Dart, Cross-Platform App Development, React, React 18, HTML, CSS, Vite, Zustand, Node.js, Express, REST APIs, JWT Authentication, PostgreSQL, MySQL, TypeORM, Docker, Google Cloud Platform (GCP), GCP Cloud Run, CI/CD, GitHub Actions, Git, GitHub, Vertex AI, NLP Intent Classification, ChatGPT, Claude, GitHub Copilot, MCP Server Integration, TDD, Agile/Scrum, Embedded C Programming

CERTIFICATION

Introduction to Flutter

Udemy

GCP - Google Cloud Platform Concepts

Udemy

TypeScript for Absolute Beginners

Udemy

PROJECTS

Sweet Shop Management System - Full-Stack Web App

Stack: React 18, Vite, Zustand, Node.js, TypeScript, PostgreSQL (TypeORM), Docker, GCP Cloud Run, GitHub Actions CI/CD

github.com/TouchstoneTheDev/incubyte-v1

- Engineered a full-stack inventory and order management system with **JWT authentication** and **role-based access control**; built a Node.js + TypeScript REST API with PostgreSQL (TypeORM) and a React 18 + Vite frontend with Zustand.
- Applied **Test-Driven Development (TDD)**, achieving **100% test coverage** on authentication middleware; containerized with Docker and deployed to Google Cloud Run via an automated CI/CD pipeline (GitHub Actions).

Intent Mapper Pipeline - AI / NLP

Stack: Python, Google Vertex AI, NLP

github.com/TouchstoneTheDev/intent_mapper_pipeline

- Built an end-to-end intent classification pipeline using Python and Google Vertex AI, achieving **95% classification accuracy** on the validation dataset; designed for extensibility so new intent categories can be added without full retraining.

Circular Ring Buffer - Embedded Systems (C99)

Stack: Embedded C (C99), Unit Testing

github.com/TouchstoneTheDev/embedsquare

- Implemented a memory-safe circular ring buffer in C99 for a fixed-size, resource-constrained embedded environment, handling overflow/underflow edge cases without dynamic memory allocation; validated with **20+ unit tests** covering boundary and wrap-around conditions, achieving **100% branch coverage** with zero memory faults.

Personal Portfolio Website

Stack: React, Vite, CSS, GitHub Actions CI/CD, GCP Cloud Run

- Designed and built a responsive personal portfolio site using **React** and **Vite** to showcase projects, resume, and contact details, achieving a **95+ Lighthouse performance score** through code-splitting and image optimization.
- Automated build and deployment with a **GitHub Actions CI/CD** pipeline to **GCP Cloud Run**, reducing release time from manual upload to a single **git push**.

URL Shortener API

Stack: Node.js, TypeScript, PostgreSQL, REST APIs, Docker

- Built a **Node.js + TypeScript** REST API that generates short, unique aliases for long URLs and redirects requests with **sub-50ms response time**, backed by a PostgreSQL store for mappings and click analytics.
- Added rate limiting and input validation to prevent abuse, and containerized the service with **Docker** for consistent local and production deployment.
